

SOLUTION SPOTLIGHT:

LocalSign

Explanation

LocalSign is an AssureSign application that allows users to capture and implement electronic signatures from a physical signature device into any working document. The solution mirrors the traditional 'pen to paper' signing process, yielding an exact electronic replica of a written signature — putting first time electronic signers at ease. The solution leverages communication pathways between a signing device, the LocalSign software, and your internet browser to afford its users and signers with a seamless electronic, in-person signing experience.

Facts

- Available for purchase by any consumer*
- Functional in most environments where internet connectivity is available
- Supported by browsers: IE9+, Edge, Firefox 3+, Chrome and Safari 3+
- Operational on supported Wacom and Topaz signature devices
- Transfers and stores signature data within integrated document management systems
- Enhances in-person signing experience
- May be used in conjunction with email and SMS signing methods

Steps to Success

1. **Contact** an AssureSign agent to activate LocalSign

2. **Purchase** a supported Wacom or Topaz signature device

3. **Download** the LocalSign software

4. **Connect** signature device to your supported PC/laptop

**Additional fees apply*
